Publication No. US20040034888A1

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Liu, Jingdong

APPLICANT: Carou, Yihua

APPLICANT: Carou, Yihua

APPLICANT: Carou, Yihua

APPLICANT: Carou, Yongwel

TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement

FILE REFERENCE: 38-21(53313) B

CURRENT APPLICATION NUMBER: US/10/425,114

CURRENT APPLICATION NOS: 73128

SEQ ID NO 26656

IENGTH: 969
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 GCAATGTGATCTGGAACCTGGTTTCTTGGGTGCGACGCTAGTTATGACTG------ 110

This sequence represents a 3' untranslated region (UTR) which was used in the construction of the recombinant expression cassette of the invention. The expression cassette is for effecting expression of a foreign gene in a transformed plant and comprises a promoter operable in plants, an untranslated leader sequence, a foreign gene of interest, and a 3'UTR. This cassette may be used to transform plants, for genetic engineering of plants or in improving the expression of transgenes in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated DNA molecule useful for genetic engineering of plants or for improving the expression of transgenes in plants, particularly corn

The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the Us patent of file at the program of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme cosmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polymucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        424
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Liu J,
   The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the polymucleotide consisting of a sequence encoding an amino acid sequence to sequence. The US patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme camporate participation of the cell cycle pathway, for conferring increased resistance to plant disease, for manipulating growth rate in lighth or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, introgen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one content. This sequence represents a plant full length insert content. This sequence represents a plant full length insert of the increase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1174
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the sequence. Lumi7Doc102004014888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pesses, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease. For producing galactomannan, ignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photocognythesis or carbohydrate, nitrogen or phosphorus use and/or uptake crease condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert
                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               396 AGCCGGCTTTATGTGCCTAGAAACTAGTAGCTAGTGTTTGCTGCTGTCGAATGACACTAT 455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          content. This sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the
                                                                          New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for improving yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8

CCTCGTTTGTGGCGGGGGGCGCTGGAGCCCGGTCTGGTTGGGTTGGGAAGCCCTTTAAAC 232
plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increased said character of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polymucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; galactomannan production; lignin production; plant growth regulator; yield; plant growth; plant development; seed oil; protein yield;

The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme

polymicleolistic consisting of a sequence encounty an author evidence.

Yeavilable in electronic form from the US patent office at
ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polymucleotide
of the invention are also useful in physical arrays of molecules and as
plant breeding markers. The recombinant DNA construct is useful for
improving plant tolerance to cold, heat, drought, herbicides, extreme
osmotic conditions, pathogens or pests, for manipulating growth rate in
plant cells by modification of the cell cycle pathway, for conferring
increased resistance to plant disease, for producing galactomannan,
combination in plants, for improving yield by modification of
photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
or by providing improved plant growth and development under at least one
streams condition or for modifying seed oil or protein yield and/or
content. This sequence represents a plant full length insert
polymucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                              The invention describes a recombinant DNA construct comprising a polymuclocide consisting of a sequence encoding an amino acid sequence and included the consisting of a sequence.
                                                                                                                           New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AGCCGGCTTTATGTGCGTAGAAACTAGTAGCTAGTGTTTGCTGCTGTCGAATGACACTAT

cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for 358 418 The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polymucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant calls by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for increasing the rate of homologous recombining in plants, for improving yield by modification of 298 180 181 GTGGCGGGGGCGCTGGAGCCCGGTCTGGTTGGGAAGCCCTTTAAACTGTTGTCA 240 photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert 9 used in the recombinant DNA construct of the 299 GCAATGTGATCTGGAACCTGGTTTCTTGGGTGCGACGCTTGTTATGACTGTCGTCAGTAA AGCCGGCTTTATGTGCCTAGAACTAGTAGCTAGTGTTTGCTGCTGTCGAATGACACTAT GCAATGTGATCTGGAACCTGGTTTCTTGGGTGCGACGCTAGTTATGACTGTCGTCAGTAA AATTTGGGGGCTCCCCGTATGAGATGCTGCCGGGCAAGGCCTCGGTGTCCCACCTCGTTT AGCCGCTTTATGTGCGTAGAACTAGTAGCTAGTGTTTGCTGCTGTCGAATGACACTAT Gaps recombinant DNA construct, useful for improving plant tolerance ö DB 13; Length 487; χ; Cao Sequence 487 BP; 99 A; 118 C; 143 G; 127 T; 0 U; 0 Other; Score 245.8; DB 13; Length Pred. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme camporate pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, ignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosyntheeis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stream of the cell full length insert content. This sequence represents a plant full length insert content. This sequence represents a plant full length insert of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New recombinant DNA construct, useful for improving plant tolerance to cold, hear, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for improving yield.

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, increased resistance to plant disease, for increasing the rate of homologous recombination in plants, for impressing the rate of homologous recombination in plants, for impressing the pathogen or phosphorus use and/or uptake to providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert of the content. This sequence represents a plant full length insert of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               228

The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at try. seqdata.uspto.gov/sequence.hmm?DocID:2004034888. The polymucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or perss, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, introgen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stream of the modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert content of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           228

The array is useful for screening a patient for resistance to docetaxel. The array is also useful for monitoring a cancer patient receiving docetaxel therapy. The present sequence represents a human cDNA differentially expressed in response to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        147 CTGCCGGGCAAGGCCTCGGTGTCCCACCTCGTTTGTGGCGGGGGGGCGCTGGAGCCCGGTC 206

Sequences ABP31028-ABP35561 represent 4534 novel human proteins
designated ORF (open reading frame) 1-4534, and sequences ABN75054-
ABN79697 represent cDNAs encoding them. The invention also encompasses
polypeptides at least 80% identical to the ORF1-ORF4534 (collectively
referred to as ORFX) proteins, polymuclectides at least 85% identical to
the ORFX mucleic acid sequences, vectors and host cells comprising ORFX
polymelectides, the recombinant production of ORFX proteins, antibodies
polypeptides, methods of screening for modulators of ORFX proteins and
polypeptides, methods of screening for modulators of ORFX proteins and
collymelectides and disorder. The ORFX proteins of the invention have a wide
crange of biological activities, such as cytokine, cell proliferation,
cell differentiation, immune modulation, hammatopic of the invention have a wide
crange of biological activity, and may also be involved in the determination
cell differentiation, immune modulation, hammatopic activity,
cell differentiation, immune modulation, hammatopic activity,
cell differentiation, immune modulation, because of the invention activity,
cell differentiation, antiniffarmatory activity, thromothytic activity,
cell differentiate activity, and may also be involved in the determination
cranged and antibodies may be used in the treatment of cancers,
coll bedily characteristics, fertility and behaviour. ORRY proteins,
corpus and antibodies may be used in the treatment of cancers,
corpus transplantation, disorders of tissue growth and regeneration,
corpus transplantation, disorders of tissue growth and regeneration,
corpus transplantation, disorders of tissue growth and regeneration,
corpus transplantation, disorders of tissue growth and regeneration
corpus transplantation, disorders of tissue growth and regeneration
corpus transcriptes, in the identification and cloning of homologous
corpus adapted and probes, in the detection of ORFX genomic sequences, in generate and probes, in the detection of ORFX genomic acids may additionally be

The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to associated (CA) nucleic acids encoding them. The invention also relates to amethod for treating coancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample cartivity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a citivity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a classe. This sequence represents a human CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequence (ABL16176-ABL30511), expressed DNA ABR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CACTATGCAATGTGATCTGGAACCTGGTTTCTTGGGTGCGACGCTAGTTATGACTGTCGT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                                 Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                   Drosophila melanogaster genomic polynucleotide SEQ ID NO 33796.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3879 BP; 1070 A; 1069 C; 979 G; 761 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 3879;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; SEQ ID NO 33796; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           62; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2959 decricalala accedence de contra 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 55 CACTATGCAATGTGATCTGGAACCTGGTTTCTTGGGTGCGACGCTAGTTATGACTGTCGT 114
